TEKNO CAM 4300 UHD

With the TeknoCam 4300 UHD (tk 754-2600 UHD) we are presenting the most recent member of our endoscopic camera series. The latest 4K technology opens the impressive world of Ultra High Definition (UHD). In comparison to the already established Full HD-quality, the UHD provides a 4-times better resolution. Due to this latest technology the camera characterizes itself with natural shades of colour and colour-brilliance as well as extraordinary contrasts and richness of detail. The four different camera head buttons provide a direct approach to all important functions. With the On Screen Menu the functions of the camera head buttons may be individually selected.
